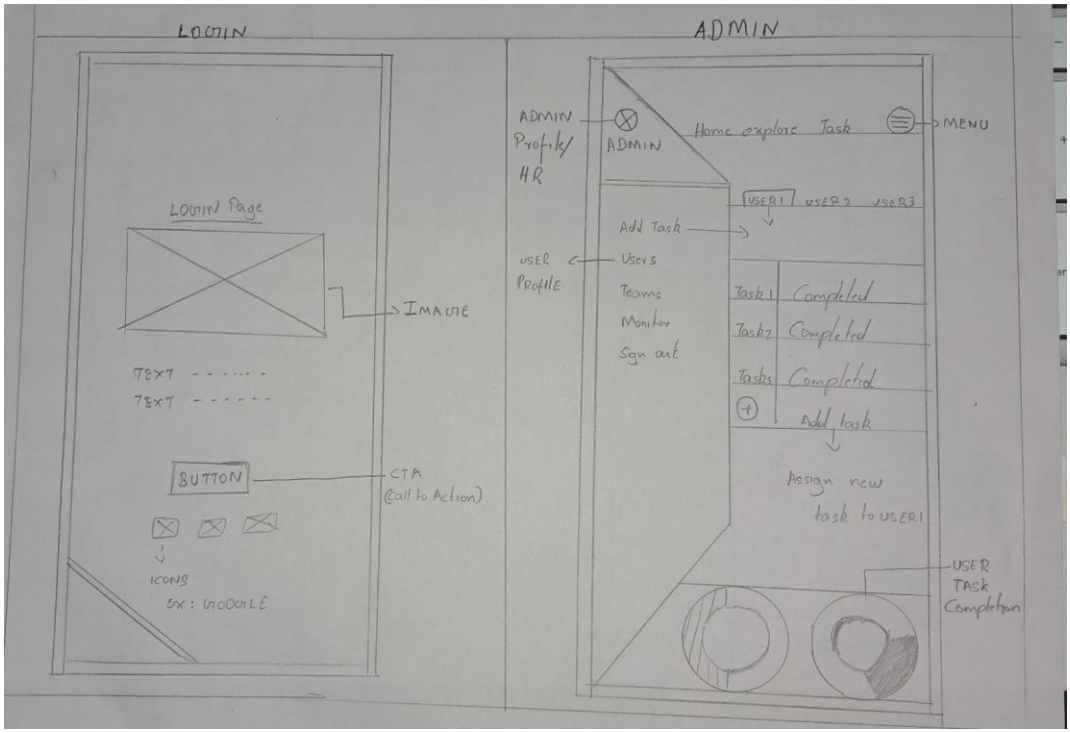
SPRINT 2

LOW - FI WIREFRAMES

1. Mobile Wireframes (Traditional Method)

The mobile wireframes were designed using a **traditional sketching method on A4 sheets**. This approach helps designers quickly visualize layout ideas without focusing on visual styling.

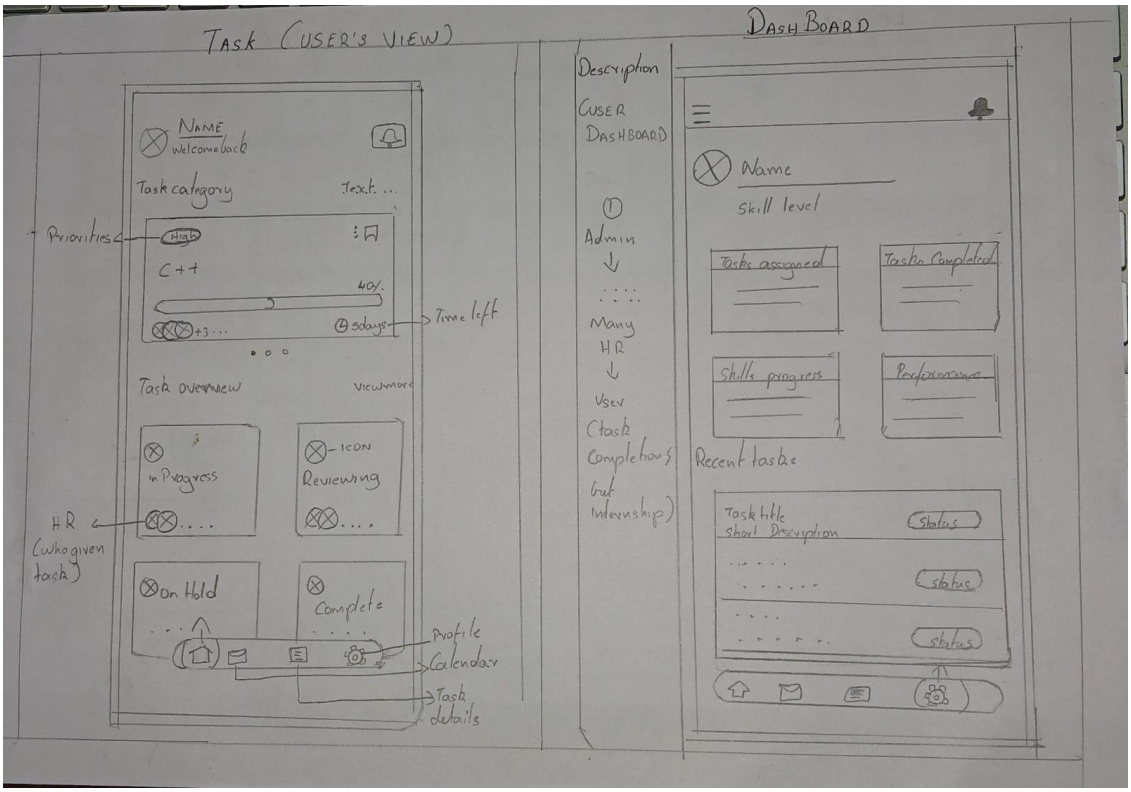
Sketching allows rapid iteration and helps in exploring multiple design possibilities before moving to digital tools.



Mobile Screens Designed

1. Login Screen
2. Dashboard Screen
3. Task Management Screen
4. Profile / Activity Screen

These wireframes focus on **simple navigation, accessibility, and efficient information display** for mobile users.



Advantages of Traditional Wireframing

- Faster idea exploration
- Encourages creativity
- Easy to modify layout structure
- Helps designers focus on usability first

Desktop Wireframes (Modern Digital Method)

For the desktop interface, wireframes were created using the modern design tool **Figma**. Digital wireframing allows more precise layout planning and helps designers build structured interfaces suitable for large screens.

Desktop wireframes provide a **detailed layout representation** and improve collaboration between designers and developers.

Desktop Screens Designed

1. Login Page
2. Dashboard Page
3. Task Management Page
4. Admin / HR Dashboard

These wireframes ensure that users can easily navigate through the platform and access important information quickly.
